PROFILE:
I am a front-end software developer who loves to create web applications that are a seamless balance of advanced programming and brilliant aesthetics to provide the best user experience.

TECHNICAL SKILLS:
Proficient with: JavaScript, TypeScript, HTML, CSS, React/Redux, Next.js, Vercel, Flow.js, Yarn/NPM, Gulp/Grunt, Jest, React Testing Library, ESLint, Prettier, SASS, Styled Components, Styled System, Storybook, Figma, and Sketch App.
Experience with: React Native, AngularJS, Ember, Backbone, Python, Django, Node, Express, Mongo, jQuery, Ionic, Cordova, Photoshop, and Illustrator.

EXPERIENCE:
Senior Software Engineer - Web | Circulo Health | July 2021 - Present
As the sole front end engineer on a team of 40+ engineers, I am responsible for overseeing all of our web applications, as well as being the liaison between engineering and design. My tasks include:
- Owning the repository that houses our public facing website using Next.js, Vercel, and React
- Building the foundations for all web applications using Next.js, Vercel, and React
- Using React, Styled Components, and Styled System to build the foundation for a design system package
- Ensuring all web applications meet design expectations before being shipped

Senior Software Engineer - Web | Sprout Social | April 2018 - July 2021
Contributed to a front end architecture allowing customers to dive into social media analytics. I implemented proper React/Redux principles to create a rich, fast, & meaningful web experience for users. My tasks included:
- Built a complex reporting product for customers to understand their social media activity
- Used proper React and Redux fundamentals to contribute to a large web application
- Worked closely with product managers to obtain feedback from customers on newly shipped features
- Created and enhanced components for our public React component library and design system
- Collaborated with platform engineers to optimize API payloads between the web and platform
- Updated legacy reports and applications from Backbone.JS to React

Front End Software Developer | Peach | October 2015 - April 2018
Built and maintained a semantic, organized, and scalable front-end architecture. I worked with product managers, operations associates, and company stakeholders to solve complicated problems. My tasks included:
- Implemented proper AngularJS techniques to build a fast and responsive user-facing web application
- Built and maintained reusable front-end components for quick and agile development
- Rebuilt vital internal tools to make them faster and more scalable for future expansion
- Used SASS core principles to create rich web and mobile experiences
- Utilized Mixpanel to a/b test the successes and failures of new products and features
- Pioneered the process of rebuilding our native iOS and Android application using Ionic and Cordova
- Implemented a new process for the creation and maintenance of all customer-facing emails

Project Manager/Graphic Designer | Votiv | September 2011 - June 2015
Promoted and advanced the career of our clients by leveraging their talent. I developed personalized plans for music publishing and distribution, artist management, and strategic marketing.

EDUCATION:
Code Fellows | Seattle, WA – Certificate in Front-End Web Development. 2015
University of Washington | Seattle, WA – Bachelor of Science in Mathematics. 2012
